

WHAT'S IN THE MAG?

Always relevant, always original

The magazine's split reflects our target reader profile and provides easy navigation through the various articles within.

All editorial features are unique and timely; our writers draw on comments and concerns expressed by the school leader community and wider sector developments. We don't rely on press releases; we pride ourselves on providing original, relevant and usable information and insight.

Insight

Keeping up-to-date with all that's going on when it comes to school buildings can be an all-consuming endeavour. This section of the magazine has been designed to keep readers ahead of the game and fully informed in terms of sector news, regulations and legislation through informative articles, best practice features and expert advice. An all-you-need-to-know guide to executing your grandest plans – by the book.

Spotlight on

Here we shine a light on some of the ambitious projects schools have embarked on. We provide in-depth case studies of both primary and secondary schools with the aim of sharing learning and insight. The section also examines the initiatives and challenges that SBMs have faced on the road to building the future – providing innovative solutions along the way.

Bricks and mortar

Aware that sometimes while the spirit is willing, the information is lacking, in 'Bricks and mortar' we get technical. Through a combination of case studies, analysis, top tips and investigative features we set out what schools across the country are doing to ensure their school buildings make the grade. It's all about sharing best practice so SBMs can be confident they are spending in the right places on the right supplies and services – and of course saving where possible! We cover everything from the building blocks of successful premises development and design to the latest trends in materials and facilities.

Interiors

A RIBA report, *Better spaces for learning* underlined the impact that a school's infrastructure – classrooms and corridors to playgrounds – can have on students and the learning environment. Here we look at how schools are building interior spaces that are more conducive to learning. We offer expert advice on everything inside, including innovative ways that SBMs can get the look, feel and functionality of school spaces just right, and how they can deck their school out with the right equipment – desks, chairs and classroom dividers – as well how they can select the right providers for everything including the bathroom sink.
